Receiver PERSONA

Personal Information

Age : 63

Gender : Male

Job : Retired Commercial Driver (Low Pension Income)

Role : Receiver / Patient (Gangrene Amputee)

Background

- **Tech Level:** **Beginner–Intermediate** (Opens WhatsApp/FB links easily; struggles with complex multi-step web forms)
- **Quote:** *"I want to regain my independence without sacrificing my dignity or broadcasting my health struggles to strangers."*

Goals

- **In-App Chat:** Private messaging with donors/support without exposing personal phone numbers.
- **Strict Data Privacy:** Medical files and personal IDs remain confidential with the platform—never shared with donors.
- **Frictionless Request Flow:** Simple, minimal-step form designed for low digital literacy.

Motivation

- **Doorstep Delivery:** Volunteer or low-cost delivery for heavy devices.
- **Recirculation & Return:** Easy return workflow to pass the device to another patient once recovered.

Pain

- **Privacy Loss:** Forced to share private medical stories publicly on Facebook groups to get help.
- **NGO Bureaucracy:** Slow verification delays urgent mobility needs.
- **Logistics :** High transport costs and fear of receiving broken/unusable gear.

Used App

- **WhatsApp:** Links shared by family members.
- **Facebook:** Regional community and charity groups.
- **Direct NGO Outreach:** Local community development associations.

Receiver PERSONA

Personal Information

Age : 38

Gender : Male

Job : Accountant

A busy caregiver looking after his elderly mother who recently had knee surgery and needs temporary mobility equipment.

Background

- Faces a sudden medical situation requiring immediate home care equipment
- The required equipment is very expensive to purchase brand new.
- The need is strictly temporary (3-6 months), making purchasing an impractical financial decision.

Goals

- Find a clean, reliable wheelchair and walker for a short period (2-3 months).
- Save the high costs of buying brand-new medical equipment for temporary use.
- Get the equipment delivered directly to his house to save time.

Motivation

- Guaranteed hygiene and sanitization standards before receiving the equipment.
- Door-to-door delivery and pickup services.
- Clear photos and honest reviews about the equipment's current condition.
- A simple, trustworthy platform with no hidden fees or complicated deposit processes.

Pain

- High Costs: Buying new equipment is too expensive for a temporary need.
- Hygiene Concerns: Worried about the cleanliness and sterilization of borrowed or rented equipment.
- Time: Doesn't have the time to search in multiple offline stores due to his full-time job.

Used App

- **Facebook:** Searches locally in charity groups and community pages to ask for available equipment.
- **Healthcare Apps (Vezeeta / Yodawy):** Familiar with booking medical services and ordering medications online, meaning he is comfortable with digital forms and tracking systems.

Tech level Advanced

Receiver PERSONA

Personal Information

Age : 21

Gender : Male

Job : College student

Goals

- His medical details stay confidential, not visible to donors or classmates.
- Receive elbow crutches that work and are sanitized
- Wants to get verified and matched quickly, since he couldn't go to college while immobile.

Pain

- Has to go through a tedious process of sharing posts across multiple platforms and groups
- Not all Facebook groups allowed anonymous posting
- Available crutches were mostly overused and in a bad condition

Background

- **Tech Level:** Advanced (navigates websites easily).
- Fractured his knee two years ago, and he wanted elbow crutches to move around easily

Motivation

- To easily return or donate the crutches after he recovers
- Hopes for an easy process that doesn't require travelling to another city for donation.

Used App

- **WhatsApp:** Family and friends.
- .**Facebook:** University and community groups

DONOR PERSONA

Personal Information

Age : 22

Gender : Female

Job : Recent Graduate

Background

- Wants to help people because medical equipment is too expensive for many families.
- Noticed that Egypt has no safe platform to share or donate medical devices.
- Sees that hospitals charge money for temporary device use, which is hard for home care.
- Wants to safely lend unused family medical devices to patients who really need them.

Goals

- Access to diverse medical devices, especially respiratory and critical care equipment.
- Guaranteed identity verification through National ID verification for both parties.
- Clear tracking to know who borrowed the device and its total usage history.
- Clear legal terms, safety acknowledgments, and optional security deposits.

Motivation

- In-app chat for seamless and safe communication between lender and borrower.
- Seeing the device's usage history and knowing how many people it helped.
- A structured, stress-free return tracking system with due-date reminders.

Pain

- Fear of not getting the borrowed equipment back or facing severe delays.
- Difficulty in coordinating pickup/return logistics and fearing personal privacy breaches.
- Lack of legal protection, official agreements, or guarantees if the equipment is lost.

Used App / Tech Level

- Has not used any medical equipment sharing app before.
- Tech Level : Advanced - Highly comfortable using modern mobile apps and websites.

DONOR PERSONA

Personal Information

Age : 47

Gender : Female

Job : Housewife

Background

- She cared for her husband during his illness and relied on a medical bed, wheelchair, breathing device, blood pressure monitor, and medical cane, so she knows how essential these devices are. After her husband passed away, she donated the wheelchair, bed, and cane rather than leave them unused at home. She still keeps the blood pressure monitor and breathing device, and lends them to relatives, friends, or anyone who needs them for a temporary period

Goals

- Simple process: device name, photo, condition (works well or not), and her area. No long form or lots of data.
- Wants a notification when the device is delivered, ideally with a photo or confirmation from the receiver.
- Phone and ID verification of the requester, with not too many documents, just a reasonable check that the need is real.
- She wants to chat through the website without sharing her phone number at first, with an admin available only when a problem happens, not involved in every message.
- Needs a guarantee on lent devices, since medical equipment is expensive and important.

Motivation

- She wants to know who has her device and what it's used for without contacting the borrower repeatedly
- She also wants an Equipment Journey feature that shows her device's full history: how many people it helped, who borrowed it, and its condition after each loan.

Pain

- No single clear place to find out who needs medical equipment. She has to ask people she knows and search herself, which takes time she may delay donating because she wouldn't know where to start.
- Her biggest worry is fake requests, then the safety of the device. She wants it to help someone in real need, not be exploited or resold also She would lose trust in a site immediately if requests have no verification,
- Long forms and many steps would make her leave

Used App/Tech Level

- No specific app but she would ask on facebook groups
- Intermediate - she can use social media apps also search the internet and use simple websites, but she may need help if a website has too many steps or complicated procedures

Donor PERSONA

Personal Information

Age : 38

Gender : Male

Job : Accountant (Middle Income)

Role : Donor / Device Owner (Wheelchair Owner)

Background

- **Tech Level:** **Intermediate** (Comfortable with apps and forms; wants a quick process with few steps)
- **Quote:** *"I have a device I no longer need. I want it to reach someone who truly needs it, safely and without hassle."*

Goals

- **Simple Donation Form:** Quick form to list a device with photos and condition, in a few minutes.
- **Privacy & Safety:** Phone number and address stay hidden until I accept a request from a verified patient.
- **Full Control:** Review request details and accept or decline before anything is shared.

Motivation

- **Helping Others:** Wants unused devices to help patients instead of sitting at home.
- **Tracking the Impact:** Wants to know the device reached someone in need and was reused.

Pain

- **Unknown Receivers:** Fear of giving a device to someone unverified, or who may resell it.
- **Slow Matching:** Posts stay unanswered, or requests arrive without clear details.
- **Logistics :** Heavy devices are hard to store, pack and send to the receiver.

Used App

- **WhatsApp:** Donation links shared by family and friends.
- **Facebook:** Neighborhood and charity groups.
- **Direct NGO Outreach:** Local charities and community associations.
